ENVIRO PLUS LINE Enviro Plus Tapered

Product Properties

Enviro-Plus Tapered is a high performance EPS insulation that offers a long-term and stable R-value, as well as having excellent dimensional stability, compressive strength and water resistant properties. These properties make it a perfect product to use in single-ply roof applications.

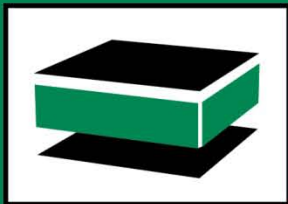

ISO Quality

E-Plus Tapered is produced in an ISO 9001-certified manufacturing facility using state-of-the-art laminating equipment. Its EPS core meets or exceeds ASTM C578 Standard Specifications for Rigid, Cellulair Polystyrene Thermal Insulation. The product's dimensional stability and compressive strengths are subject to stringent ISO quality control protocols.

Applications

E-Plus Tapered insulation:

- Gives roofing contractors the required positive slope to drain away water while retaining the structural and economic advantages of a flat roof deck.
- It works equally well in either new or replacement construction.
- In new roofs, the roofing support columns are varied in height so the final roof deck has high and low points from which to place the roof drains.
- The easiest way to improve the slope of an existing roofing system is with the addition of E-Plus Tapered insulation underneath the membrane. The thickness of the insulation is varied to create the necessary slope.
