

ENVIRO PLUS LINE

Termite Protection

While EPS insulation is not a food source for termites, it does afford the opportunity to **increase the termite protection** of your building and assure the longevity of the EPS application.

EnviroPlus Provides the Solution

Tri State Foam's entire Enviro Plus line of insulation may be protected against the ravages of termites with the application of a systemic insecticide called PREVENTOL™.

Using the active ingredient imidacloprid, PREVENTOL™ is added in low concentrations to the polystyrene bead expansion process during the manufacturing of E-Plus insulation.

The insecticide is safe for both installers & building structures as well as building occupants. In addition, the application of the insecticide does nothing to lessen the energy-saving properties of EPS insulation.

Apply Where Needed

EPS treated with PREVENTOL™ is recognized for ground-contact use on the exterior face of foundation walls, under interior or exterior foundation walls or slab foundations below grade or where located within 6 inches of exposed earth.

Call your Tri State Foam representative at 1-800-277-0967 for installation instructions and more information about this Enviro Plus construction product.
